

# EQUIVALENT FRACTIONS

by Kathleen Wiley

Equivalent  
Fractions  
Means that fractions mean the same

Equivalent  
Fractions  
Divide and multiply....yes that's their game.

For one third...  
Here's what you do...  
Pick a big denominator that the three divides into..  
DIVIDE, then multiply THAT NUMBER by  
The numerator and that's all you do.

So one third is two sixths, and four twelfths, five fifteenths too....  
So carry on... as life goes on....  
'Cause equivalent fractions are fun to do.
