

What's Your Angle?

by Kathleen Wiley

An ACUTE angle's less than 90 degrees....

An OBTUSE angle's more than 90 degrees.....

A RIGHT angle's right at 90 degrees... So tell me, what's your angle, please?

A straight line is one hundred and eighty degrees...

It's a HORIZONTAL, VERTICAL or DIAGONAL, please.,

But 360 degrees we've found

Is a CIRCLE that we know just goes around and around.

So measuring an angle is pleasure for you...

Just remember a right angle is a corner true....

So when you try to remember each angle....

Just relax because this song has got them all untangled!!!!
