

# Rocks

by Kathleen Wiley

Sedimentary... means layers...  
And not one...and not even two.....

Like a peanut butter sandwich that I make for me and you....

You take the bread and the peanut butter...  
And the jam and the jelly and the honey or some other  
Goey substance...to make the layers....like the sedimentary rocks do.

Metamorphic means change... caused from heat and pressure too..  
Metamorphic means change... caused from heat and pressure too.

Just like the moth and the butterfly.....  
That change from caterpillar to something that will fly....  
Metamorphic... means change.... caused from heat and pressure too.

But igneous needs no pressure ...It melts and cools you see...  
Yes igneous....just melts and cools.....  
and all for you and me....

We've got obsidian and then basalt...  
And many others that we ought  
To learn but now our song... is... all... through!!!
