

Mama Cow

by Kathleen Wiley

Mama Cow is a cow but her baby is a calf.
Mama pig is a sow but her piglet is just half
The size that it is going to be
When it becomes bacon for me.

Mama Frog is a-frog but her baby is an egg.
The egg becomes a tadpole and swims around your leg.
Sometimes a tadpole is called a polliwog.
Either way they both turn into frogs.

Now a mammal has fur or a mammal has hair.
A mammal has live babies almost anywhere.
And guess who is a mammal you can see?
Well, there's you and then there's me.

Now a whale is a mammal that lives in the ocean.
He has lungs and breathes air and causes quite a commotion...
When he comes above the water for air...
Whales are mammals beyond compare.

Now we go to trees. Do you know how old they are?
Well first you cut them down - then you see the awful scar
And tragedy that your cutting brings.
How old's a tree? Just count the rings!

And plants get thirsty just like you and me.
But they don't get to drink milk or go to Chucky Cheese.
A plant takes in water from its roots.
A plant helps us it never pollutes.

Next we go to eggs-eggs come from animals.
But fruits come from the ground and so do veg'tables.
So now we've had our science review.
We hope you remember 'cause it can help you!
