

# The Water Cycle

by Kathleen Wiley

## **Condensation . .**

Condensation is when water vapor meets cold air  
And the water that's been hiding in the air somewhere  
Changes to precipitation and it falls as rain or snow,  
And the water cycle starts again... so here we go.

## **Precipitation**

Precipitation is rain I know. Precipitation is hail and sleet and snow.  
Water that comes down from sky to ground. Precipitation is wet.

## **Evaporation**

Evaporation - evaporation - evaporation - Disappears!  
Evaporation - evaporation - evaporation - It's not here!
